

SLIMLINE & TRADITIONAL SHOWER TRAYS

HEAVY DUTY (ACRYLIC CAPPED ABS, STRUCTURAL RESIN BONDED STONE)

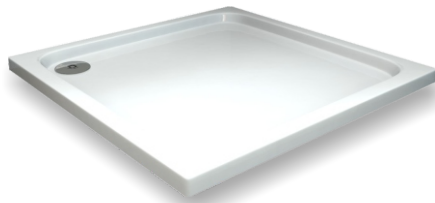

SPA-JET LTD

Manufacturers & Distributors

Spa-Jet manufactures an extensive range of both 'Slimline' and 'Traditional' shower trays.

Our shower trays are constructed using only premium materials to ensure long term durability and quality of finish. The Acrylic surface of the shower tray gives the product a long lasting colour and sheen. This surface is backed by an advanced ABS polymer which provides astounding impact resistance. This is further reinforced by heavy duty, structural resin bonded stone to ensure long term peace of mind.

This design of shower tray has enabled Spa-Jet to qualify the product to 'Class 1' European standard BS EN 14428:2004+A1:2008. We take pride in achieving this challenging status which allows us to differentiate our product from inferior 'Class 2' examples which have failed to demonstrate the durability demanded by the class 1 standard.

'SLIMLINE' LOW LEVEL SHOWER TRAY
(45-50mm deep, 90mm Hi-Flow Waste Outlet)

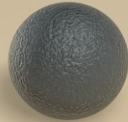

'TRADITIONAL' DEEP SHOWER TRAY
(80mm deep)

PENTANGLE

Most of our models of shower tray have the option of an 'EASY-PLUMB' panel and feet kit. The benefits of this option have added to its continued popularity amongst both home owners and installers. This option raises the shower tray onto feet thus allowing easy access to the waste trap for plumbing and future maintenance. Panels are fitted to complete the installation.

'Easy-Plumb' Tray With Panels Fitted

'Upstand' Option

The 'Upstand' option provides a 13mm lip around the outer edge of the tray. Tiles or panelling can then be fitted over the lip. This promotes a secure seal around the tray to prevent water leakage.

This option is an alternative to 'Flexi-Seal' (shown below). Either 'Upstands' or 'Flexi-Seal' are excellent solutions for prevention of damage due to water leaks.

RECOMMENDED

"Flexi-Seal" is the essential product for the installation of shower trays and baths. A permanent waterproof seal is provided between the shower tray and the installation environment via a flexible rubber seal. Supplied as a roll, "Flexi-Seal" is easily applied to the shower tray with a butyl based adhesive strip. The shower tray is then placed into position whereby tiles or panelling can be fitted over the seal eliminating the potential of water leakage. As the seal is flexible, it is able to maintain a permanent 100% water seal even when subjected to inevitable environmental movement, particularly in new builds.
